

UCLA Northwest Campus Redevelopment

The project included the redesign and construction of undergraduate housing with an additional 2,000 beds, a 248-car parking structure and associated academic, recreational and student programming facilities designed to integrate with the residential living experience, and provide an environment-rich combination of spaces and activities fostering the vitality in on-campus residential life. The University Urban Simulation Team in the School of Arts and Architecture was involved in producing fully rendered CAD models and Pfeiffer Partners Inc. constructed a 16' scale model depicting the final built-out situation.

Location

Los Angeles, California

Client

Pfeiffer Partners Architects, Inc.

SWA Scope

Landscape architectural services for Hedrick and Rieber Precincts of Phases 1 and 2 Redevelopment

Size

11 acres
