Schematic Design  
Design Development  
**Size**  
1,500 hectares (3,706 acres)  
**Architects**  
JWDA Architects

Long Mu Bay International Resort project aims to be the highest quality destination resort on the west coast of Hainan, famous for stunning scenery and clean air. The site nestles between green mountains and brilliant sunsets, with a 5.1-kilometer shoreline that represents the only west-facing beach in China.

SWA's design applies sustainable and aesthetic principles to put Hainan and Longmu Bay on the world map of international resorts. The landscape framework connects the coastline to Jian Fengling National Forest, with greenbelts that foster habitat, treat runoff, and provide trails. The resort and town center offer hotel destinations, boutique and upscale shopping, timeshare units, spas, golf, and water sports. Water transit, light rail, electric carts, and pedestrians/

bicycle routes allow visitors to take a vacation from driving, while the landscape design creates a beautiful, lush resort setting that integrates water conservation and reduces energy demands through passive cooling and solar/wind power generation.
