

Sichuan Poly Leshan Jaizhou Central Green Project Landscape Master Plan

Based on the natural water system of the site, SWA developed a comprehensive development program for a 9 square kilometer city park that reflects the local culture and tradition, and enhances the natural eco-system.

This project is centrally located at a 9 square kilometer city open space called 'Green Heart' in the city of Leshan. Leshan is about 100 miles south of Chengdu, China. Inspired by the rich local culture and the world's largest Buddha sculpture, the Leshan Giant Buddha, SWA's design emphasizes the sequence of nature, culture, and civic experiences. The unique site topography of multiple ridgelines and valleys organize the park experience as a journey through intimate space. The entire central area is designated as a public park featuring the three rivers' (Min River, Dadu River and Qingyi River), art and city character. The site is envisioned for various public and private development including: the Agri-Tourism Center, Tea Ceremony Center, Ethnic Center, Artist Village, Wellness Center, Nature Center, Botanic Garden, Museum, Boutique Hotel, Wetland Interpretive Center, Amphitheater, Buddhism Center, and Sports Park.
