PORT OF HOUSTON

Hurricanes and cloud bursts are escalating environmental pressures on the growing populations of the Gulf Coast cities, while the Port of Houston remains their economic fulcrum. The second largest gateway of international trade in the US, its operations define regional economic trends, transform coastal environments, and affect local land uses and community life. We will set out to understand the port’s material footprint on the region and catalyze a more intelligent intertwining of policy, economy, ecology, and culture through the agency of design.

Submit

We encourage applications from full-time upper level undergraduate and graduate students of landscape architecture, planning, and urban design. Returning to study in the Fall of 2017. Please check our website for more detailed information regarding the application process and for more updated information of the program as it develops. www.swagroup.com
